Vertical Phone Holder and Charger - Bosch

SKU	BEEQKIT001

Use your phone as your e-bike display and charge it at the same time

Imagine riding with your destination always in view and your phone charging as you go. The Bosch SmartphoneGrip Vertical kit turns your phone into your e-bike's display, in portrait view. Open the eBike Flow app, clip your phone in and set off.

In portrait view, you see a larger stretch of the route while navigating. The app shows your ride data, such as speed, battery level, range and arrival time.

Your phone charges on the handlebars while you ride, powered by the e-bike battery. It charges inductively (5 W) or, if your phone does not charge wirelessly, by USB-C cable (up to 7.5 W). The phone's USB-C cable is not included in the kit.

The kit includes the cable that connects the holder to your e-bike's Bosch system. Two clamps hold your phone firmly, even on cobblestones or gravel paths. The back is protected by a rubber coating, and the buttons and ports stay accessible.

Why you'll like it:

Turns your phone into your e-bike display, in portrait view
Charging on the handlebars, inductively or by USB-C cable
Includes the cable that connects to the Bosch system
Secure hold with two clamps

Will it fit your bike?

This holder is only compatible with e-bikes with the Bosch Smart System such as the Beeq models SUV Low Step and SUV High Step.
